

Efficient patient scheduling is crucial for any medical practice. **The better your patient flow, the better your cash flow.** That's why years of research and development were spent in making our *Appointment System* component the heart of Freedom Medical Systems®

Incorporating simple design and easy-to-use icon navigation, the *FMS Appointment System* integrates every aspect of the patient-scheduling process into a **single program**, giving your staff the ability to instantly access, view and update any patient or physician appointment, and streamline the flow of your clinic's scheduling with the touch of a button.

More control for your practice. Less waiting in your waiting room.

Comprehensive search & display tools allow access to appointment data months in advance. This gives users the flexibility to rearrange doctors' hectic schedules with much more lead time—virtually eliminating scheduling conflicts and longer waits for patients.

In addition, the *FMS Appointment System* also gives users the power to quickly generate any number of audit reports by category, and even print on-the-spot charge tickets to improve efficiencies and retain a healthy bottom line.

- Features a full menu of icons for smart navigation
- Easy access to patient and physician schedules months in advance
- View patients' appointment histories and insurance information at a glance
- Create custom templates for each doctor's schedule
- Generate ongoing reports to improve efficiencies
- Print charge tickets and patient-information sheets on the spot
- EMR/EHR interface capabilities
