

Insurance Scanner

Accurate record keeping is a crucial part of efficient practice management. It can also be a labor intensive and tedious process. Imagine having the power to update patient information in just a few simple steps without photocopies, paperclips or filing. Now you can.

With the *FMS Insurance Scanner*, you can say goodbye to making copies and filing insurance cards. This innovative tool integrates the tasks of scanning, collecting and organizing patients' insurance card data into a **single automated step**. In just seconds, the *FMS Insurance Scanner* lets users scan **both sides** of an insurance card, collate the information and digitally attach the file to that patient's record within Freedom Medical Systems®.

More tools to manage your records, more freedom to manage your practice.

By automating the archiving process, it makes the entire process of managing insurance records easier, more streamlined and much more reliable—in a mere fraction of the time it took with paper systems. The *FMS Insurance Scanner* is the smart way to save time and money in your front office and help keep your entire operation running smoothly.

- Superior accuracy and security over paper systems
- Integrated image notification assures complete data capture at patient registration
- Sequential scans feature single-image conversion & automated file naming/saving
- Predefined image parameters offer continuity within FMS
- 2-3 second card scanning (per side) offers faster results than most copiers
- Seamless integration capabilities within FMS
- One-click viewing and printing capabilities
- The ability to manage multiple insurance carriers within individual patient accounts
