

In busy medical practices, simple clerical tasks like printing labels used to take up a lot of time. Not anymore. With the *FMS LabelWriter® SE300*, clinics can spend less time caring about office tasks and more time caring for patients.

Delivering professional-grade imaging, the *LabelWriter's® thermal print technology* lets users print *insurance, guarantor, patient, and vial labels* directly from Freedom Medical Systems® without using local network printers. In just a matter of seconds, your staff will be able to print individual or multiple labels in virtually any size and format they need—so there's no more need for messy ink cartridges, expensive toner or obsolete ribbons. And because the *LabelWriter®* utilizes up to 700 labels on a single roll, you can virtually 'fill it and forget it.'

Professional labels. Fine print.

The *LabelWriter®* can also generate labels outside the FMS system with the *Dymo® Label Software*. With it, you can generate hundreds of different label formats in any variety of fonts and sizes—even customized graphics. What's more, the *LabelWriter®* is fully compatible with common desktop programs like Microsoft Word® and Excel®. You'll see it's the simple way to save your practice time and money.

- Large capacity storage roller saves refilling headaches
- Measurable time and money savings
- High-quality, highly professional label printing
- No ribbon, toner or ink cartridge mess

- Capable of printing virtually any label size or style, most in under five seconds
- Print single or multiple labels at one time
- Compact size offers easy placement and access
